

1035-A2-1069      **Andrew G Bennett\*** ([bennett@math.ksu.edu](mailto:bennett@math.ksu.edu)), Department of Mathematics, Cardwell Hall,  
Kansas State University, Manhattan, KS 66506. *iPod Math - How to use screencasting technology  
to help students relate activities and homework.* Preliminary report.

Screencasting software allows you to capture full-motion images from your computer screen to digital video for later playback. Pairing this with your favorite mathlets will let you create animated tutorials for your students. Add a Tablet PC and you can mix in online lectures suitable to almost any screen, even a video iPod. This talk will discuss both the process of creating such videos and how to use them effectively to support student learning. (Received September 18, 2007)
