**Netra P Khanal\*** (nkhanal@ut.edu), 401 W. Kennedy Blvd, Tampa, FL 33606. *Extended fifth-order KdV type equations.*

The dual-Petrov-Galerkin method is applied to some integrable and non-integrable fifth-order KdV type equations. The method is implemented to compute the solitary wave solutions of these equations and the numerical results imply that this scheme is capable of capturing the details of these solutions with modest computational costs.
