The X-ray transform on a compact symmetric space $M$ is here inverted by means of an explicit inversion formula. The proof uses the conjugacy of the minimal closed geodesics in $M$ and of the maximally curved totally geodesic spheres in $M$, proved in Math. Ann. 165(1966), 309-317. (Submitted to Journal of Lie Theory). (Received September 01, 2006)
