Developing a Video Tutorial Library to Service Upper Level MSE Courses. Preliminary report.

This talk will discuss a use of technology to develop a library of video tutorials for a student's use in future math and science courses. In an undergraduate math course that is a prerequisite for upper level courses a student might possibly miss or forget a concept that is paramount to success in the upper level courses. By creating this library of tutorials educators can better serve the student and instructor of upper level math and science classes. (Received September 15, 2008)
